### ■ LED Indicator Definition

- **RED LED** - Power Indicator. **Solid Red** after powering up.
- **GREEN LED** - Bluetooth status light. **Solid Green** indicates Bluetooth is connected.
- **BLUE LED** - Flight controller status light which is controlled by the flight controller firmware.
- **Orange LED** - LED Control Mode Indicator. It indicates the 4 sets of LED strips connected to LED1-LED4 pads on the corners of the flight controller are controlled by Betaflight firmware(BF\_LED mode) or the Bluetooth chip(SB\_LED mode).  
**Solid Orange** : t indicates the 4 x LEDs are in SB\_LED mode. In this mode, when the FC is powered on and in standby mode, press the BOOT button to cycle the display modes of the LEDs. You could also change modes in the app wirelessly.  
**OFF** : indicates the 4 x LEDs are controlled by Betaflight firmware.  
Long press the button for 3 seconds to switch the control modes between BF\_LED mode and SB\_LED mode.

### ■ BOOT Button

- [A]Only if the flight controller gets bricked and can't power up, please follow these steps to re-flash firmware for it:
- ① Insert a USB A to TYPE-C cable to your PC.
  - ② Press and hold the BOOT button, insert the USB cable into the flight controller, then release the BOOT button.
  - ③ Open Betaflight/Emuflight/INAV configurator on the PC, go to the 'Firmware Flashing' page, choose the target 'SPEEDYBEEF405V3' and flash.
- [B]. When the FC is powered on and in standby mode, the BOOT button can be used to controller the LED strips connected to LED1-LED4 pads on the corners. By default, short-press the BOOT button to cycle the LED displaying mode. Long-press the BOOT button to switch between SpeedyBee-LED mode and BF-LED mode.  
Under BF-LED mode, all the LED1-LED4 strips will be controlled by the Betaflight firmware.

# FC Firmware Update

8/14

SpeedyBee F405 V3 flight controller does not support wireless firmware flashing, so please flash firmware for it on your PC following the steps below:

- ① Connect the flight controller to the PC with a USB cable
- ② Open Betaflight/Emuflight/INAV configurator on your PC. Take Betaflight configurator as an example, go to the 'Firmware Flashing' page, choose the target '**SPEEDYBEEF405V3**' and flash.

The screenshot shows the Betaflight configurator interface. At the top, the Betaflight logo is on the left, and the COM port (COM6 - Betaflight STM32F405) and baud rate (115200) are on the right. There are buttons for 'Auto-Connect', 'Update Firmware', and 'Connect'. A log window on the left shows recent events, including 'Serial port successfully closed' and 'Loaded builds information for jobs from build server'. The main area is the 'Firmware Flashing' page, which has a sidebar with 'Welcome', 'Changelog', 'Privacy Policy', 'Documentation & Support', and 'Options'. The 'Firmware Flasher' section is active. It contains several settings: 'Show unstable releases' (checked), 'Enable Expert Mode' (unchecked), 'Release' (set to 'SPEEDYBEEF405V3'), 'Auto-detect' (checked), '13-07-2022 11:13 - 4.3.1' (selected), 'No reboot sequence' (unchecked), 'Full chip erase' (checked), and 'Manual baud rate' (set to '258000'). A red bar at the bottom indicates the status of the flashing process. At the bottom, there are buttons for 'Please load firmware file', 'Exit DFU Mode', 'Flash Firmware', 'Load Firmware [Online]', and 'Load Firmware [Local]'. The status bar at the very bottom shows 'Port utilization: 0.0 % U: 0.0 %', 'Packet error: 0', 'I2C error: 0', 'Cycle Time: 0', 'CPU Load: 0 %', and 'Configurator: 10.9.0 debug ea02d9a'.
